## RESTORING FROM A “FLASH DRIVE/MEMORY STICK”

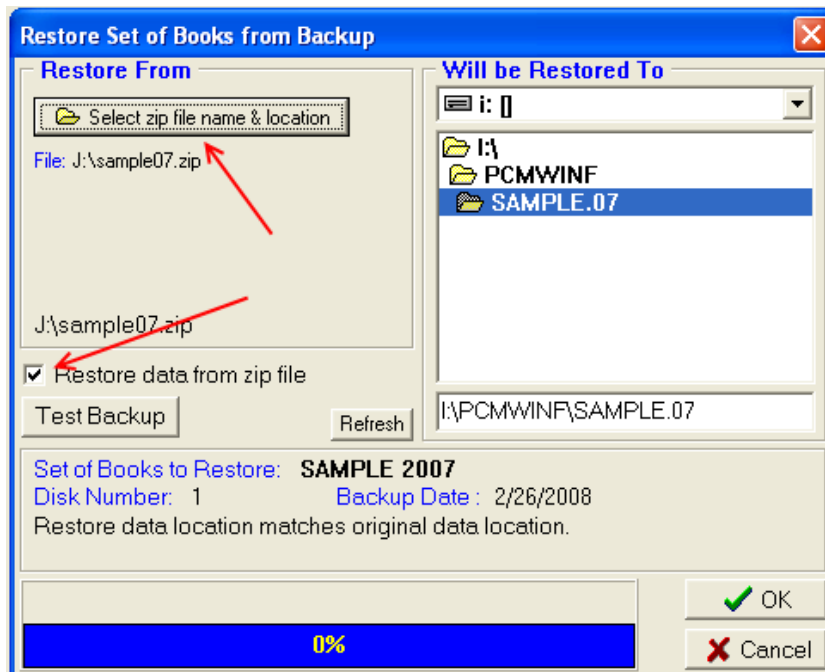

Applies to Version 2.1 or greater

[Return to PcMars Tips](#)

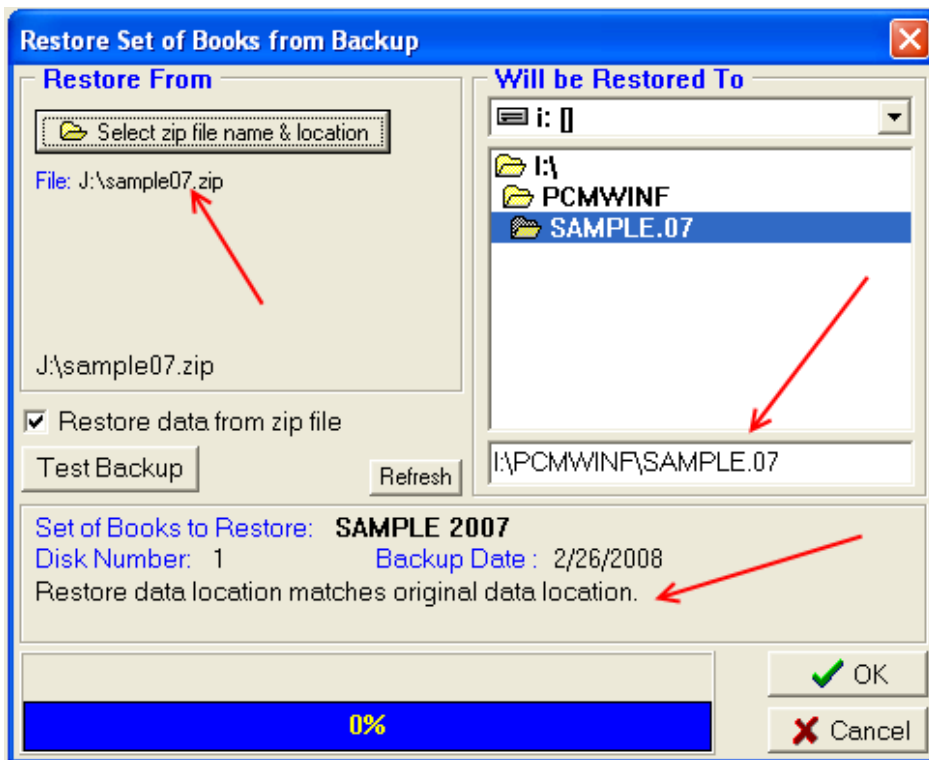

To restore data to your PcMars program from a removable drive, you would follow the steps below. First you would insert the flash drive/memory stick into your USB port. Then in your PcMars program you would click on “File” and “Restore Set of Books”.

After clicking on “Restore Set of Books”, the following screen will appear. When you restore from a “Compressed (zip) File”, you are going to want to check “Restore data from zip file” box. Then you would click on the “Select zip file name & location” button to locate your removable drive where your set of books is located. **NOTE:** You also have a “Refresh” button on this screen if the program doesn’t recognize your “Flash drive/memory stick”.

Once you have located your set of books on your removable drive and selected them, your “Restore Set of Books from Backup” screen should look similar to this. **NOTE** that the file I’m restoring from my removable drive is J:\sample07.zip. It will be restored to I:\PCMWINF\SAMPLE.07. **You need to be sure the entire path is showing in this window.** You will also note that it says “Restore data location matches original data location.” and there is a GREEN OK checkmark to click on and begin the restore process. Once the data is restored it will say “Backup Complete”.

You can now go to “File” and “Open Set of Books” and your restored books should be there.
